

# Innovation for safer and more competitive workplaces

**Michael SCHAEFER**

BGIA – Institut für Arbeitsschutz der Deutschen Gesetzlichen Unfallversicherung, Germany

Today high-tech control systems manage the most parts of safety of modern machinery and machinery plants. For the use of new technologies, which incorporate also new emerging risks, requirements and also technologies should be made available and implemented. Conventional protective equipment is very often accompanied by a decrease in productivity and therefore seldom accepted by users. Thanks to the use of new technologies, modern safety-related systems influence the productivity of machinery and machinery plants only slightly and are therefore well accepted and less often defeated. The presentation aims to present and discuss the latest findings and experience in the field of some safety products.
