

## Answers to pending VoxR questions

### Session 3: Panel discussion - Stakeholder views on the future role of standardization, testing and certification

#### Working safer with construction machinery - manufacturer meets user (Rolf Gehring, EFBWW and Martin Sonnenberger, PORR AG)

- @Gehring: Do you or another expert of your union take part in the relevant standardisation group CEN/TC 151 WG 1?
- @Gehring: Does it make sense to involve the manufacturers into the social dialog?
- @Gehring: is the Social dialog a good alternative to European standardisation?
- @Sonnenberger: Driving licence for construction machinery will be mandatory? If not, how should it work?
- @Sonnenberger: Are the special driver licences a subject for European standardisation?
- @Sonnenberger: Could the social dialog improve the financial support of the engagement of users in standardisation?

#### Questions to the discussion panel

- @ALL: What do we need in order to be able to use the technological innovations for the benefit of OSH? How can we evaluate and raise awareness for new risks associated with new technologies?
- @ALL: Do we need new forms of cooperation using social media?
- @ALL: What do you think about the study of 45003 on stress without the European agreement between trade unions and employers in 2004!
- @ALL: How to support end user participates to standards? OSH institutions are leaving standards for lack of government support. Do you want to leave standards to manufactures and NBs?
- @ALL: Manufacturers speak always about speed... but yesterday we had the example of the robotics standard that was developed so quickly that limits were not yet defined, and the standard was not useable....
- @Jäger: what do you think of certification of competence of workers?
- @Fae: How can the coordination of notified bodies and notifying authorities be improved?
- @Faé: What are your ideas to get rid of these incompetent notified bodies?

- **@Jäger: What do you think about ISO 45003 which is studied in ISO without trade unions?**
- **@Jäger: Mr.Jaeger are you a politician or a worker's representative? Which was your last work place visited?**
- **@Hühn: Is the international market asking for certificates for your gloves?**
- **@Hühn: What do you think of the possibility of simplified recertification of PPE if the product and the state of the art have not changed?**
- **@Moritz: Why does Germany take unilateral approach i.e. PPE or CPR creating barriers to market? If you are not satisfied of what has been reached at European level, it seems you shall engage more in the EU work and not believe to solve problems alone in Germany**
- **@Moritz: Is information for use on the internet sufficient?**
- **@Moritz: Will future regulation not be based on risks but on processes?**
- **@Moritz: Is the American system of liability more efficient than European market surveillance?**
- **@Moritz: what can Germany learn from other countries with regard to OHS?**
- **@Moritz: How about safety specifications during maintenance also to be included in the design phase?**
- **@vanMierlo: Will employers take part actively in standardization groups? Maybe via representatives of associations. I do ask for classically product standards (e.g. earth moving machinery) and not only management systems.**
- **@vanMierlo: Do you think of European OHS for European workers or of international OHS for workers worldwide?**
- **@vanMierlo: Do you think that OHS will be improved worldwide because of innovation and digitalization?**
